Springer International

Journal of Mathematical Biology

Founded and edited in 1974 by H. J. Bremerman, F. A. Dodge Jr., and K. P. Hadeler.
As of Vol. 9 (1980) edited by K. P. Hadeler and S. A. Levin.

Copyright

Submission of a manuscript implies: that the work described has not been published before (except in the form of an abstract or as part of a published lecture, review of thesis); that it is not under consideration for publication elsewhere; that its publication has been approved by all coauthors, if any, as well as by the responsible authorities at the institute where the work has been carried out; that, if and when the manuscript is accepted for publication, the authors agree to automatic transfer of the copyright to the publisher; and that the manuscript will not be published elsewhere in any language without the consent of the copyright holders.

All articles published in this journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article (e.g., as offprints), as well as all translation rights. No material published in this journal may be reproduced photographically or stored on microfilm, in electronic data bases, video disks, etc., without first obtaining written permission from the publisher.

The use of general descriptive names, trade names, trademarks, etc., in this publication, even if not specifically identified, does not imply that these names are not protected by the relevant laws and regulations.

While the advice and information in this journal is believed to be true and accurate at the date of its going to press, neither the authors, the editors, nor the publisher can accept any legal responsibility for any errors or omissions that may be made. The publisher makes no warranty, express or implied, with respect to the material contained herein.

Special regulations for photocopies in the USA: Photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee is paid. This fee is US \$ 0.20 per page per copy, plus a basic fee of US \$ 2.00 per article. All fees should be paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA, stating the ISSN 0303-6812, the volume, and the first and last page numbers of each article copied. The copyright owner's consent does not include copying for general distribution, promotion, new works, or resale. In these cases, specific written permission must first be obtained from the publisher.

Instructions for authors

Journal of Mathematical Biology

Authors are requested to read the following instructions carefully before preparing their manuscript.

A. General

Manuscripts should be submitted **in triplicate**:

(i) either to the **Editor** who, in the opinion of the author, is most closely concerned with the subject matter of the paper (this should be the rule); (ii) or to one of the Managing Editors. Papers submitted for publication should preferably be written in **English**.

To facilitate communication between authors, editors and publisher, the author should furnish a fax number and/or e-mail address on the title page of the manuscript.

Each paper should be preceded by a **short abstract** in English of the most important results and no more than **5 key words**. If the paper is not in English, an **English title** and an **English summary** are required. Manuscripts (**in triplicate**) must be in their final form and typed on one side of the paper only, in double spacing with wide margins. The author should also keep a copy of the manuscript.

Normally only typesetting errors should be corrected in the page proofs. A **charge** is made for **extensive changes** introduced after the manuscript has been typeset.

Formulae should be typed whenever possible. Copies produced by a dot matrix printer are not accepted unless clearly legible.

Illustrations and diagrams should be submitted on separate sheets and not included in the text. They should be good-quality and drawn in India ink using clear, uniform lines. Computer-drawn figures are acceptable, provided they are of comparable quality. Lines and curves must be smooth. Lettering 2 mm high is recommended. The publisher reserves the right to reduce or enlarge illustrations and diagrams. The author should indicate in the margin of the manuscript where illustrations and diagrams are to be inserted.

Footnotes should be numbered consecutively and placed at the foot of the page on which they occur (not at the end of the article).

On the first page of the manuscript a short **running title** should be provided (not exceeding 70 characters, including spaces).

The **list of references** at the end of the paper should **always** be in alphabetical order and include the **names** and **initials** of **all** authors and the **year** of publication (see examples below). Titles of journals and book series should be abbreviated in accordance with *Zentralblatt für Mathematik*. Whenever possible, please replace all references to papers accepted for publication, preprints or technical reports giving the exact name of the journal, as well as the volume, first and last page numbers and year, if the article has already been published or accepted for publication.

Citations in the text should be either **(a)** by numbers in square brackets, e.g., [1], or Freed and Melrose [1], referring to an alphabetically ordered and numbered list: **(b)** by the authors' initials in square brackets, e.g., [F-G], **(c)** or by author and year in parentheses, e.g., Freed and Melrose (1992). Any one of these styles is acceptable if used *consistently* throughout the paper. In the third system, if there are two authors, both should be named, e.g., Conway and Sloane (1988); if a work with more than two authors is cited, only the first author's name plus "et al." need be given; e.g., Komor et al. (1979); if there is more than one reference by the same author or team of authors in the same year, then a, b, c, etc. should be added after the year both in the text and in the list of references.

In the **list of references**, the following examples should be observed:

Journal article:

1. or [F-M] Freed, D. S., Melrose, R. B.: A mod k index theorem. *Invent. Math.* **107**, 283-299 (1992)

Complete book:

2. or [C-S] Conway, J. H., Sloane, N. J.: Sphere packings, lattices, and

groups (Grundlehren Math. Wiss. Bd. 290) Berlin Heidelberg New York: Springer 1988

Single contribution in a book:

3. or [S] Sjöstrand, J.: Microlocal analysis for the periodic magnetic Schrödinger equations and related questions. In: J. M. Bony et al.: Microlocal analysis and applications, Montecatini Terme 1989 (Lect. Notes Math., vol. 1495, pp. 237–332) Berlin Heidelberg New York: Springer 1991

Fifty (50) **offprints** of each paper will be supplied free of charge. Additional offprints may be ordered at cost price when the page proofs are returned.

B. Marking-up the manuscript

1. Text

The words “**Theorem**”, “**Lemma**”, “**Corollary**”, “**Proposition**” etc. are normally printed in **boldface**, followed by the formulation in *italics* (or, if italic type is not available, underlined with a single straight line) and with the end clearly indicated. The words “*Proof*”, “*Remark*”, “*Example*”, “*Note*”, etc. are printed in *italics* with the formulation in ordinary (roman) body type, and **Definition** in boldface. The text of the definition itself should be in roman except for the concept defined, which should be in *italics*. If any portions of text in the manuscripts are underlined and are intended to be printed with this underlining, a remark explaining this must be attached.

2. Formulae

Letters in *formulae* are printed in *italics* and figures in roman if not marked otherwise. In doubtful cases it will help the printer if the position of indices and exponents is marked thus: h_{β} , a^{ψ} . Spacing of indices and exponents must be specially indicated ($A_m^{n\ m}$) otherwise they will be set (A_{mn}^{nm}).

The following are frequently confused and should be made unambiguous:

$\cup, \cup, \cup, U; \circ, o, O, 0; \times, x, X, \chi, \kappa; \vee, v, \nu;$
 $\theta, \Theta, \phi, \Phi, \varnothing, \emptyset; \psi, \Psi; \varepsilon, \in;$

a', a^1 , the symbol a and the indefinite article a ; also the handwritten letters:

$c, C; e, l; I, J; k, K; o, O; p, P; s, S; u, U; v, V;$
 $w, W; x, X; z, Z;$

Please take care to distinguish these capital letters by double underlining.

C. Papers prepared with T_EX

Authors who prepare their papers with Plain T_EX are encouraged to ask for Springer-Verlag's Plain T_EX macropackage, called PJour1 either by writing to Springer-Verlag or by requesting the package by e-mail from

svserv@dhdspri16.bitnet.

LaT_EX stylefiles are in preparation.

Authors who wish to submit disks to the editor should do so only after the manuscript has been accepted for publication. They must then include any macro definitions they have used together with a printout for reference. It is important to ensure that the text is identical in the hard copy and in the soft copy. The production time for papers submitted in this form can be reduced considerably.

Authors who have written their papers in T_EX but have not, for whatever reasons, used Springer-Verlag's macros should likewise send in a disk and corresponding hard copy. Springer-Verlag will then decide on a case-by-case basis whether it makes sense economically to work from the T_EX files.

Final check:

- All formula characters unambiguous?
- Names and complete affiliations of all authors provided on titlepage?
- Summary enclosed?
- Short running title provided?
- If the paper is not in English, English title and English summary provided?
- Texts and ends of theorems, lemmas, etc., clearly marked?
- All figures enclosed?
- References styled according to the Instructions for authors?

Plain T_EX users:

- Request PJour1 macropackage from: svserv@dhdspri16.bitnet.
- Submit disk with corresponding hard copy after acceptance of manuscript.
- Make sure disk and hard copy are identical.

T_EX users do it with Springer macros

If you are used to preparing your manuscripts with plain-T_EX, you may be interested to hear that we have created a macro package for the layout of the journals listed here.

Articles may now be submitted as plain-T_EX files using our macros. They will be phototypeset directly from your T_EX-file, thus cutting down proofreading and publishing times.

The macros plus AMS fonts are available on 3.5" DOS diskettes and are free of charge.

Please order your copy by writing to

Springer-Verlag
Journal Production
Post Box 10 52 80
W-6900 Heidelberg, FRG

e-mail: Springer @dhdspr16.bitnet

An e-mail to svserv@dhdspr16 containing *help* will provide you with info on our **mailserver**.

**Please do not forget to indicate
the journal for which you
are intending to submit your
manuscript.**

L^AT_EX stylefiles are in preparation.

Biological Cybernetics

Editors:

Editors:
H. D. Barlow, J. D. Cowan, M. Egelhaaf,
N. Franceschini, A. S. French,
B. Hassenstein, G. Hauske, V. Henn,
M. Ito, B. Julesz, T. Kohonen,
J. W. Kuiper, W. R. Levick, A. Michelsen,
H. Mittelstaedt, T. Poggio, V. Torre,
D. Varjú

The concepts of information processing, transmission of information and automatic control originated within physics, computer science and technology and are now also powerful in the biological sciences, where analogous processes are encountered. Despite the differences between nonliving and living systems, many of the logical procedures, experimental, theoretical, and mathematical approaches applicable to the physical sciences also find important applications in the life sciences.

Biological Cybernetics is an interdisciplinary medium for the exchange of experimental and theoretical information in the following fields:

- quantitative analysis of behavior;
- quantitative physiological studies of information processing in receptors, neural systems, and effectors;
- computational studies of perceptual and motor information processing tasks; biologically relevant studies in the fields of artificial intelligence, robotics, control system theory, information theory and automata theory;
